Subject: Dr. Mussetter's Reconstructed Depth Information

Mark,

At the January hearing I asked Dr. Mussetter to provide his depth reconstruction for the second channel of the Salt where he had reconstructed depth for both channels of the River at that point but had only provided the depth for one channel. He agreed to provide that. In addition, Dr. Mussetter only provided his average and minimum depths for his reconstructed depths and it is requested that he also provide each depth that was a factor for his average and any corresponding data. Perhaps the best way for the information to be shared is if you submit it as evidence.

Rather than develop a formal request, I am writing this email in the hope that there would be no objections to the sharing of relevant information.

Please let me know prior to the next hearing on March 10, 2016, if you are able to provide that information.

Thanks,

Eddie
